Office Action Summary

Application No.

09/853,913

Applicant(s)

RAJASEKARAN, SANGUTHEVAR

Examiner

Michael Pyzocha

Art Unit

2137

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 11 May 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-37 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-37 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 2137

DETAILED ACTION

1. Claims 1-37 are pending.

Claim Rejections - 35 USC § 101

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-27 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The language of claims 1-27 raises a question as to whether the claim is directed merely to an abstract idea that is not tied to a technological art, environment or machine which would result in a practical application producing a concrete, useful, and tangible result to form the basis of statutory subject matter under 35 U.S.C. 101.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the

Art Unit: 2137

art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 1-9, 28-29, 33-34 rejected under 35 U.S.C. 103(a) as being unpatentable over Shoup et al ("Securing Threshold Cryptosystems against Chosen Ciphertext Attack") and further in view of Schneier ("Applied Cryptography").

As per claims 1, 28, 33, Shoup et al discloses, generating keys, encrypting a secret and distributing the secret to the owners (see page 5).

Shoup et al fails to disclose the key generation and encryption technique being multiple-key public-key cryptography (in this case RSA), and deleting this information after distribution.

However, Schneier teaches the use of multiple-key public-key cryptography (RSA) and deletion of secrets (see page 527 where the K 's are the d and $q_1 \dots q_n$ and 184-185 for the deletion).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to use Schneier's multiple-key and deletion methods in the secret sharing of Shoup et al.

Motivation to do so would have been that RSA is the standard in much of the world (see page 474), and that old keys

Art Unit: 2137

and old secrets must be deleted because they are valuable even if never used again (see page 184).

As per claims 2-4, the modified Shoup et al and Schneier system discloses receiving the n secret owner pieces (see Shoup et al page 5) and computing $S' = S^{dq} \bmod N$ for the first time and $S' = S'^q \bmod N$ for each time after that (see Schneier page 527 where d and $q_1 \dots q_n$ are the $K_1 \dots K_n$ and since in the applicants case only one of the K 's are sent per time it is known that Schneier's method can be done incremental rather than all at once as in the example).

As per claims 5, 29, 34, the modified Shoup et al and Schneier system discloses, generating keys, encrypting a secret and distributing the secret to the owners (see Shoup et al page 5); the use of multiple-key public-key cryptography (RSA) for generating key's and encrypting the secret and deletion of secrets (see page 527 where the K 's are the d and $q_1 \dots q_n$ and 184-185 for the deletion).

As per claims 6-9, the modified Shoup et al and Schneier system discloses receiving the n secret owner pieces (see Shoup et al page 5) and computing $S' = S^{dq} \bmod N$ for the first time and $S' = S'^q \bmod N$ for each time after that and $S' = S'^{d'} \bmod N$ for the last instance (see Schneier page 527 where d , d' and $q_1 \dots q_n$ are the $K_1 \dots K_n$ and since in the applicants case only

Art Unit: 2137

one of the K 's are sent per time it is known that Schneier's method can be done incremental rather than all at once as in the example).

5. Claims 10-19, 30-31, 35-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over the modified Shoup et al and Schneier system and further in view of Graunke et al (U.S. 5,991,399).

As per claims 10, 30, 35, the modified Shoup et al and Schneier system discloses the choosing, computing of numbers for the multiple-key RSA as described above (in this case the products of $e, e_1 \dots e_n$, with $d, d_1 \dots d_n$ are the K 's), and distributing the secret pieces to the secret owners as above.

The modified Shoup et al and Schneier system fails to disclose generating and storing a database for the product of d and a unique number of the d_i 's (part of the keys).

However, Graunke et al teaches storing a key in a database (see column 7 line 59 through column 8 line 9).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to use Graunke et al's method of storing keys in a database to store the products of the modified Shoup et al and Schneier system.

Art Unit: 2137

Motivation to do so would have been to allow these products to be available to a server (see Graunke et al column 7 lines 59-66).

Claims 11-13 are rejected as in claims 2-4 above.

As per claim 14, in order to completely decrypt and restore the secret the correct value from the database must be accessed and used to compute the final exponential and modular operations).

As per claims 15-19, 31, 36, the modified Shoup et al, Schneier and Graunke et al system discloses computing $S^{ee'}$ (see Schneier page 527). Claims 15-19, 31, 36 are rejected as in claims 10-15, 30, 35 above with the above mentioned addition.

6. Claims 20-24, 32, 37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shoup et al further in view of Schneier.

As per claim 20, 32, 37, Shoup et al discloses encrypting a secret, and performing a forward k out of n secret sharing algorithm (see page 5).

Shoup et al fails to disclose deleting the secret.

However, Schneier teaches deleting a secret (see pages 184-185).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to use Schneier's deletion method in the secret sharing of Shoup et al.

Art Unit: 2137

Motivation to do so would have been that old keys and old secrets must be deleted because they are valuable even if never used again (see Schneier page 184).

As per claims 21-24, the modified Shoup et al and Schneier system discloses distributing the secrets, receiving the secrets, performing reverse k out of n secret sharing and decrypting to recreate the secret (see Shoup et al page 5).

7. Claims 25-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over the modified Shoup et al and Schneier system as applied to claim 20 above, and further in view of Shamir ("How to Share a Secret").

As per claim 25, the modified Shoup et al and Schneier system fails to disclose dividing the secret into k pieces and performing n polynomial evaluations at n points of a degree- k polynomial using the k pieces of the encrypted secret as polynomial coefficients; wherein each of the k secret owner pieces includes a result of one of the n polynomial evaluations and a corresponding one of the n points.

However, Shamir discloses such a break up (see page 613).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to use Shamir's method of polynomial break ups in the modified secret sharing method of Shoup et al and Schneier.

Art Unit: 2137

Motivation to do so would have been to create a k out of n threshold scheme (see Shamir page 612).

As per claims 26-27, the modified Shoup et al, Schneier and Shamir system discloses distributing the secret pieces and receiving k out of n of the pieces (see Shoup et al page 5), and performing reverse k out of n secret sharing by solving a system of generated linear equations (see Shamir page 613); assembling and decrypting the pieces to recreate the secret (see Shoup et al page 5).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Pyzocha whose telephone number is (571) 272-3875. The examiner can normally be reached on 7:00am - 4:30pm first Fridays of the bi-week off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Caldwell can be reached on (571) 272-3868. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
